

### **AMENDMENTS TO SPECIFICATION**

Page 5, the second paragraph is amended to read:

According to a third aspect of the invention, floor covering panels having a laminated structure include a panel decorative layer on the top surface, and bevels or such are formed as by cutting away on one or several edges of the panels, near the top side and the surface of these bevels is also provided with a bevel film or coating-like decorative layer, preferably a layer provided as a separate material and separate from the panel decorative layer. In particular, such a layer preferably consists of a separately provided print. Thanks to the use of such a separate print, the bevels can be easily provided with a bevel decorative surface. The base panels can then be made in a conventional manner by sawing them out of a large plate which has already been provided with a panel decorative layer, and the bevels may be printed later.

Page 18, the first full paragraph is amended to read:

The bevel decorative layer 25 may as such consist of several layers, but it preferably contains at least one film or coating-like layer imprinted with a pattern, for example a food pattern printed on a paper layer. In this case, the print 26 can be realized on the bevels 15 or such with a similar pattern. As a printing technique is applied for the decorative layer as well as for the print 26, it is very easy to match both patterns as far as colour and/or design are concerned.
